## Séminaire / Seminar AMAP

Dr Aida Cuni-Sanchez is an Assistant Professor at the Norwegian University of Life Sciences, and an honorary fellow at the University of York. She has a PhD in environmental Sciences from the University of Southampton (UK) and a Licenciatura in Biology from the University of Barcelona (Spain). She has over 10 years of work experience in 12 countries in tropical Africa, where she has focused on tropical forest ecology, carbon stocks, forest use by local communities and local communities' adaptation to climate change. She received the 2020 L'Oreal-UNESCO Women in Science UK Award for Sustainable Development. As well as developing the AfriMont plot network, she is a key partner in research collaborations in Africa including AfriTRON (tropical lowland forest monitoring), Mountain Research Initiative, Mountain Sentinels and ATBC-Africa Chapter. **Email:** a.cunisanchez@york.ac.uk **Personal website:** https://www.nmbu.no/emp/aida.cuni-sanchez

# Tropical montane forests in Africa: carbon, water and rural livelihoods

presented by

### Dr. Aida Cuni-Sanchez

Norwegian University of Life Sciences

### <u>ABSTRACT</u>

Tropical montane forests, those found above 800m elevation, are unique socio-ecological systems. Lower temperatures, cloudiness, wind and waterlogged soils affect tree composition, forest structure and carbon stocks. Notably, those in Africa have higher carbon than previously expected- I will discuss potential drivers. I will also provide a quick overview of the importance of occult precipitation on ecosystem functioning, and discuss the ecosystem services they provide to local peoples, considering instrumental, relational and intrinsic values of Nature.

### <u>KEY WORDS</u>

Tropical forests; Ecology; Ecosystem services; Africa
